

Library Management System - Project Explanation

Introduction

This project is a **Command-Line Based Library Management System** written in **C++**. It allows users to perform **CRUD (Create, Read, Update, Delete) operations** on books and members. The system uses **fixed-size arrays** instead of dynamic containers like vector or map, making it simple and efficient.

Features

1. Book Management

- Add a book.
- View all books.
- Update book details.
- Delete a book.

2. Member Management

- Add a library member.
- View all members.
- Update member details.
- Delete a member.
